How To Run

Run

```
cd scripts/  
./CompileAndRun.sh
```

Generate JavaDoc

```
cd scripts/  
./GenerateDocs.sh  
cd ../docs #To see all the generated javadocs.
```

Run CompileAndRun.cmd or CompileAndRun.sh under Scripts file to start the Application.

How To Use

1. DNS Providers are shown on the main page. Users need type in the public key and private key, then select the checkbox in front the company name then click "config" to get to manage the domain.
2. In the domain manage frame, all domains under this DNS Provider will show in the frame. Then user can choose to add a new domain or edit or delete a exist domain.
